

- covalent chromatin modification
- lymphocyte activation
- nucleocytoplasmic transport
- autophagy
- phosphatidylinositol metabolic process
- Interleukin-6 signaling
- RNA export from nucleus
- IL-4 signaling pathway
- Transcriptional regulation by RUNX1
- regulation of dephosphorylation
- mitotic cell cycle process
- myeloid cell homeostasis
- Ubiquitin mediated proteolysis
- SUMO E3 ligases SUMOylate target proteins
- Signaling by Rho GTPases
- PID CXCR4 PATHWAY
- negative regulation of cellular component organization
- microtubule cytoskeleton organization
- ubiquitin-dependent protein catabolic process
- regulation of transforming growth factor beta receptor
