

- covalent chromatin modification
- lymphocyte activation
- regulation of cellular protein localization
- CD4-positive, alpha-beta T cell differentiation involve
- protein localization to nucleus
- regulation of chromatin organization
- PID FOXO PATHWAY
- peptidyl-serine phosphorylation
- glycerophospholipid metabolic process
- autophagy
- macromolecule methylation
- ER-nucleus signaling pathway
- PID CXCR4 PATHWAY
- regulation of protein catabolic process
- Oncostatin M signaling pathway
- phosphatidylinositol-mediated signaling
- Androgen receptor signaling pathway
- myeloid cell differentiation
- cellular response to organic cyclic compound
- cellular response to hormone stimulus
