

- Interferon alpha/beta signaling
- regulation of response to biotic stimulus
- response to interferon-beta
- response to interferon-alpha
- Immune response to tuberculosis
- Antiviral mechanism by IFN-stimulated genes
- positive regulation of immune response
- Type I interferon induction and signaling during SARS
- immune effector process
- positive regulation of response to biotic stimulus
- interleukin-27-mediated signaling pathway
- regulation of immune effector process
- response to interferon-gamma
- Immunoregulatory interactions between a Lymphoid :
- positive regulation of cytokine production
- Cell Cycle, Mitotic
- response to bacterium
- Adaptive Immune System
- macrophage activation involved in immune response
- cellular response to virus
