

- adaptive immune response
- Interferon alpha/beta signaling
- response to type I interferon
- Immune response to tuberculosis
- immune effector process
- response to interferon-beta
- response to interferon-alpha
- Antiviral mechanism by IFN-stimulated genes
- Immunoregulatory interactions between a Lymphoid ;
- regulation of immune effector process
- MDA-5 signaling pathway
- leukocyte activation involved in immune response
- positive regulation of cytokine production
- positive regulation of interferon-beta production
- response to interferon-gamma
- TNF receptor superfamily (TNFSF) members mediatir
- multi-organism transport
- myeloid cell activation involved in immune response
- ISG15-protein conjugation
- positive regulation of NIK/NF-kappaB signaling
